

BruxZir®

SOLID ZIRCONIA CROWNS & BRIDGES

"More brawn than beauty"

- Ideal for bruxers who have destroyed natural teeth or previous dental restorations
- An esthetic alternative to metal occlusal PFMs and cast gold
- Conservatively prepare as thin as 0.5 mm with feather edge margins, much like you would cast gold

BruZir Solid Zirconia crowns & bridges are made from the highest quality zirconia powder from Japan. We chemically and physically preprocess the zirconia powder to further reduce the zirconia particle sizes. BruZir milling blanks are then created through a unique patent-pending process. Unlike conventional high-pressure milling blank manufacture, our processing gives BruZir improved light transmission, which provides a lower, more natural shade value.

**SEM of sintered
colloidally processed BrZrZr**

BruZir's 50% smaller average grain size improves its physical properties.

[illegible]

The anthropologic Strechro study also shows that the only way to get a lower risk is significantly lower than Corvino's (110-48). The University of Michigan study was run using an eight-chamber multiple drawing simulator (1, 2) in their studies.

BruxZir®
Clinical Solution Series

and require additional clearance can wreak havoc on PPM installations as it did on this fractured PPM bridge. The solution would not accept a metal occlusal on the first molar and the occlusal fracture at a free end.

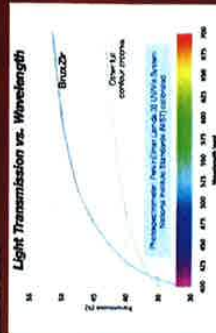

This monolithic Bruzzo bridge has been in place for 15 months. Because it has no porcelain overlay, Bruzzo is indicated for areas with limited occlusal space.

- Ideal for bruxers who have destroyed natural teeth or previous dental restorations
- An esthetic alternative to metal occlusal PFM's and cast gold
- Conservatively prepare as thin as 0.5 mm with feather edge margins, much like you would cast gold

BruxZir®

Clinical Solution Series

Integrating advanced ceramics and metal cores or cast restorations into a single finished prosthesis. The pre-fabricated crown is then cemented in the first visit and the porcelain is fired after three months.

- Ideal for bruxers who have destroyed natural teeth or previous dental restorations
- An esthetic alternative to metal occlusal PFM's and cast gold
- Conservatively prepare as thin as 0.5 mm with feather edge margins, much like you would cast gold

Scientific Validation

BruxZir Solid Zirconia crowns & bridges are made from the highest quality zirconia powder from Japan. We chemically and physically reproduce the powder to further reduce the residual particle size. BruxZir milling banks are then created through a unique patent-pending process. Unlike conventional high pressure milling, dark manufacturing, our patented process, BruxZir Zirconia improved light transmission, which provides a lower, more natural shade value.

SEM of sintered isostatically pressed zirconia

SEM of sintered colloidal processed BruxZir zirconia

The SEM images illustrate greater size of BruxZir zirconia improves its physical properties.

Light Transmission vs. Wavelength

BruxZir zirconia exhibits higher light transmission, resulting in a more natural shade value.

Wear Compatibility

Volume (mm³)

Antagonist Wear

Volume (mm³)

The antagonist zirconia will wear down BruxZir zirconia at a rate of 0.001 mm per year. The zirconia will wear down at a rate of 0.001 mm per year. The zirconia will wear down at a rate of 0.001 mm per year. The zirconia will wear down at a rate of 0.001 mm per year.

BruxZir®

SOLID ZIRCONIA CROWNS & BRIDGES

"More brawn than beauty"

- Ideal for bruxers who have destroyed natural teeth or previous dental restorations
- An esthetic alternative to metal occlusal PFM's and cast gold
- Conservatively prepare as thin as 0.5 mm with feather edge margins, much like you would cast gold

**SEM of sintered
isostatically pressed zirconia**

**SEM of sintered
colloidal processed BruxZir**

BruxZir's 50% smaller average grain size improves its physical properties.

Light Transmission vs. Wavelength

Before After

BruxZir exhibits higher light transmission, resulting in a more natural shade value.

Wear Compatibility

BruxZir's 50% smaller average grain size improves its physical properties.

Antagonist Wear

Is a recent study at the University of Birmingham, UK, found that BruxZir crowns cause less wear to opposing teeth than PFM crowns? The study found that BruxZir crowns caused less wear to opposing teeth than PFM crowns.

The antagonistic abrasive action wear causes BruxZir to be a superior choice for patients with bruxism. The study found that BruxZir crowns caused less wear to opposing teeth than PFM crowns.

BruxZir®

SOLID ZIRCONIA CROWNS & BRIDGES

"More brawn than beauty"

■ Ideal for bruxers and grinders who have destroyed other restorations.

■ An esthetic alternative to posterior metal occlusal PFMs and cast gold.

■ Conservatively prepare as thin as 0.5 mm with feather edge margins, much like you would cast gold.
